

ECOGREEN ONLINE COURSE

THEME 1 – POST-VIDEO QUIZ QUESTIONS

1. Increasing resource use is a huge problem for a sustainable economic future. How much did the global resource use increase since the 1970s?
 - Doubled
 - Tripled
 - Quadrupled
2. Global greenhouse gas emissions are the main drivers of climate change. How many percent of greenhouse gas emissions come from the richest 10% of the world's population?
 - 50%
 - 30%
 - 10%
3. The so-called Imperial Mode of Living of humans in the global North plays a central role for today's unsustainable economic system and life. Thereby the global North's production and consumption became dependent on the exploitation of what?
 - Other humans
 - Nature
 - The outer space
 - Machines
4. Through the massive increase in the use of fossil fuel-based energy, our economy turned into a high-input/high-output system. While this enables mass production it is completely unsustainable – why?
 - A high-input/high-output economy produces more than humans can consume
 - A high-input/high-output economy still depends on limited resources
 - A high-input/high-output economy consumes more energy than it produces
